

THE YEAR IN REVIEW

What our investigative team has learned covering Covid-19 every day for 300 days.

These are facts that we have documented and confirmed with multiple credible sources, and have previously reported on Planet Waves and Planet Waves FM. For more information please see [PlanetWaves.net](https://planetwaves.net). Daily updates at [Covid19 News](#) and [Planet Waves FM](#) at the top of the website.

— **There was no bat at the market** in China that caused a global pandemic shutting down the entire Western world. No "intermediate animal" necessary for zoonotic transfer from bat to human has ever been identified. Any potential evidence at the market was destroyed ("sanitized") before sampling took place. There is not one iota of evidence to support the zoonotic claim, and the claim is disproven by meticulous [contact tracing of alleged cases](#) originally claimed to have been connected to the Huanan Wet Market in Wuhan.

— **The "pandemic" was planned.** See [Event 201](#) and many other documents and statements of officials which reveal the scheme.

— **There is no routine medical test for a virus**, only for alleged markers such as genetic fragments. There are only surrogate tests which must be previously validated. The polymerase chain reaction (PCR, a molecular surrogate test) [does not test for infection](#), for live or whole virus, for viral load, for infectiousness or for causation of symptoms. There are numerous sources of false positives for both the PCR and antibodies tests.

— **The PCR as it is being used is fraud as a matter of fact and law.** Its flaw is being exploited to maintain the case count. It is not a diagnostic tool. It has been known since 2006 at the latest that it can return [100% false positives](#), as has been [widely reported](#).

— **PCR positive result is not a "confirmed case" of anything.** In New York State's official lab, the cycle threshold is running at 40, where "[all you get are dead nucleotides](#)," in the words of Anthony Fauci — in other words, all noise, no signal. PCR positive is medically and epidemiologically irrelevant.

— **The purported virus [has not been isolated or purified](#).** Anyone claiming to have done so is using a made-up, fraudulent definition of "isolated" (and not purified) that should really be called "a contaminated mashup of genetic material subjected to the medically irrelevant PCR assay."

— **The Gold Standard ([proper validation or calibration](#)) has not been met** for the alleged PCR test for 2019-nCoV. Neither Koch's nor Rivers' postulates have been met. All such claims are lies intended to conceal this fact and confuse the public. That PCR has not been validated renders all research conducted with it invalid or questionable at best.

(continued on other side)

(continued from other side)

- **2019-nCoV has never been proven to cause any illness**, or to exist conclusively.
- **If there is a contagious virus that causes illness, that remains to be proven** via the Scientific Method and its specific theorems for microbiology, those of Koch and Rivers. Claims to the contrary are designed to cover up the lack of scientific rigor required to establish a single cause for any illness.
- ***The Lancet*, a British medical journal, refers to this situation as a "syndemic," or [outbreak with multiple causes](#)**, including environmental causes and preexisting sickness.
- **From the beginning the PCR was and is primed with a theoretical, edited, [nonexistent "viral" sequence](#) that can pick up healthy human RNA among other sources of false positives.** U.S. government documents and other scientific sources (including the notes of Christian Drosten, the designer of the original WHO assay in January) confirm this.
- **Masks do not protect against a virus or anything.** Masks instead [concentrate bacteria](#) and [carbon dioxide](#) and increase the chances of getting pneumonia. They trigger the immune system, which can set off numerous other latent illnesses or conditions.
- **There's no scientific proof that masks stop a virus.** No state can produce a study saying that they do. A records access request has revealed that the New York State Department of Health [has NO studies on mask safety or effectiveness](#) in its files.
- **Lockdowns do not protect anyone.** In the spring, New York's Gov. Cuomo said that 66% of New Yorkers admitted to the hospital at the peak of the crisis [had stayed home](#), i.e., isolated. This suggests that the lockdown caused rather than prevented illnesses.
- **Based on a published, peer-reviewed [study of 9.5 million people](#) in Wuhan, there is no asymptomatic spread of "covid."** This study was done with testing *and also tracing of symptomatic cases and their contacts*, not just the PCR.
- **There is no increased mortality, death rate, or excess deaths.** If the numbers are reported honestly, deaths will be the same as in 2019. "Covid" deaths are recategorizations of deaths from preexisting conditions [by order of CDC](#). Any increase will be due to the "harvesting effect" or "dry tinder effect" and will be within standard deviations.
- **There is no such thing as "covid."** It is a construction; a mere redefinition of preexisting diseases that have been recategorized. It should therefore be called a syndrome (like AIDS) but is fraudulently being called a distinctive disease.
- **Measles virus has [never been proven](#) to cause the measles.**
- **When tested in a direct experiment**, doctors could not cause person-to-person spread of Spanish Flu, according to a [1919 study in JAMA](#).
- **Nearly all the time, when a virus is blamed, the cause of mass sickness was a chemical, a drug or other environmental insult.**
